

10

MANUAL FILLING STAND

The TORR 10 stand is a tabletop device designed to aid in the manual filling of most bags and pouches from 1- to 20-liters.

The stand has a spout latch to secure the bag fill gland during manual filling and capping.

A set volume can be measured with a user-supplied graduated container and funnel or by setting the stand and bag onto a scale.

The bag is then manually capped after burping excess air from the bag and pushing the cap into the fully locked position after filling.
