

100

MANUAL BAG AND POUCH FILLER

The TORR 100 is a tabletop, manual filler intended for small production runs and laboratory use.

The operator manually uncaps the bag, positions the fill valve on the spout and meters the fill measurement by hand using a valve and sight gauge on the fill tank.

Capping of the bag and control of air entering the bag are performed manually by the operator. A hand lever is used to fully lock the cap in the bag.

Vacuum and nitrogen purge available as an option.

Not suitable for higher sanitation filling. Must be disassembled for cleaning.

See it in action at

www.torrindustries.com/100

PRODUCT MEASUREMENT

Visual sight gauge. +/-1 % accuracy by volume.

CONTACT SURFACES

All piping is 316L Stainless Steel and FDA approved plastics and flexible lines.

UTILITIES

No electrical power required.

Air: 80 psi @ 5 cfm

Nitrogen: 50 psi @ 2 cfm

Optional vacuum and nitrogen purge are performed with foot pedals. Requires customer supplied compressed air and nitrogen.

PERFORMANCE

Bags per minute is dependent on bag size and operator agility. Typically 0.5 to 1 BPM.
