

110

SEMI-MANUAL BAG FILLER

The TORR 110 Filler is designed to fill pouches and bags from 0.75 liter to 20 liter capacity. These settings are easily configured using the

on-board touch screen control panel that is developed and programmed specifically for this machine.

The 110 is a single head, semi-manual filler requiring each bag to be loaded manually.

Once a bag is loaded into the spout gripper, the operator then removes the cap and inserts the fill valve into the fill gland using the lever arm.

The bag is then filled by simply pushing the fill button once per cycle, delivering the product accurately and consistently every time.

The lever arm is then used to remove the fill valve and re-cap the bag. The bag can now be manually released from the gripper.

Each cycle takes 15 - 30 seconds.

PRODUCT MEASUREMENT

1" turbine flowmeter is standard, $\pm 1/2$ % accuracy by volume and is constructed of FDA approved food grade acetal plastic.

CONTACT SURFACES

All piping is 316L Stainless Steel and FDA/approved plastics and flexible lines.

UTILITIES

110 or 240 VAC 50-60Hz @ 3 amps. Air -90 PSI @ 2 CFM clean, dry air.

Vacuum and nitrogen purge fill nozzle system available as an option.

PERFORMANCE

Bag fill rate is dependent on product flow rate to the filler and operator agility. Rates up to 200 bags per hour based on 3-liter.

OPERATOR INTERFACE

On-board touch screen for batch counting, and fill volume adjustment.
