

HIVEBREW™ ONE

**A COFFEE CONCENTRATE BREWER
ACCELERATED COLD EXTRACTION!**

The HIVEBREW ONE creates espresso strength concentrate that is around 5 times ready to drink strength. The concentrate can be used as a low-cost base for all your cold coffee drinks. Makes great Americanos by adding hot water! Use it for Iced coffee by adding ice and cold water.

The brewer requires no power or gas, it's a controlled gravity flow of water through the coffee bed.

Its Japanese inspired! It uses a multiple Kyoto drip process combined with a Shishi-odoshi rocking water meter. The drip rate is adjustable to allow you to set the brew time from 10 to 40 minutes to create your desired concentration and taste profile.

Typically, a third of a pound of fine ground beans produces 10 fluid ounces of 5:1 concentrate. (6 to 7 TDS Total Dissolved Solids). That's 5 - 6-ounce cups of iced coffees per brew. About 5 cents of quality coffee per cup.

- **Brew Espresso Concentrate at Home**
- **Countertop gravity brewer. No power.**
- **Easy cleanup**
- **Cold or Hot brewing**
- **Works for fine or coarse grind**
- **Also loose leaf tea brewing**

List price is \$499.00

How to Use...

- The brew cell hold 1/3 of a pound.
- Pre infusion is recommended for cold brew with fine grind. Suggest you mix 6 ounces of water in a zip lock bag. For hot brew you do not need to pre-infuse.
- Add 16 oz. of warm water around 95F to the tank on top
- Adjust the flow so the hinged dump is around 1 minute to fill.
- The concentrate is 6 to 7 TDS which is around 5 to one for ready to drink strength.

** Yields and throughputs vary based on coffee origin, roast levels, and grind size. TORR does not warrant performance.

Actual brew results may vary by +/- 20%.
