

HIVE CAFÉ™ 3

**COLD CONCENTRATE
BREWING SYSTEM**
ACCELERATED COLD EXTRACTION!

The HIVE CAFÉ® is designed for coffee shops and small chains. The fast gravity cold drip brewing process provides high TDS, espresso strength concentrated coffee that is perfect for iced drinks and affogatos. It can then be cut for RTD cold brews or for hot coffee.

1.5 gallons of water and 3 pounds of coffee make 0.9 gallons of typically 5 TDS concentrate. The concentrate can be diluted with water to 6 gallons of 1.5 TDS ready to drink cold brew.

Brew times are super-fast at 15 to 25 minutes. The fast brew time retains the unique flavors of your blends. After a quick rinse you can be back into the next brew in a maximum of 10 minutes.

The HIVE CAFÉ® uses the same extraction method as our larger multicell production brewers that produce up to 4000 gallons of RTD per shift.

- 1-Gallon Stainless Water Reservoir with Adjustable Water Flow
- Hexagonal Hive Brew Dispersion Plate
- 3 - Pound Capacity Hexagonal Hive Brewing Chamber with Stainless Lock-in Filter
- Stainless Support Assembly
- 4 - Gallon Clear Sanitary Concentrate Collection Container with Dispensing Tap and Stainless Lid

Brew time is 15 to 25 minutes depending on your coffee bean origin, roast level, and grind size.

The HIVEBREW® gravity drip process provides 16% to 21% extraction of dissolved solids in the beans. This is up to 60% more yield per pound from your beans than passive immersion brewing systems.

The unique patented hexagonal brew cell has a water dispersion plate on the top of the cell and a cleanable stainless-steel filter in the bottom that eliminates throw away filters.

1.5 gallons of water and 3 pounds of pre-infused fine grind coffee yields an average of 0.9 gallons of typically 5.0 TDS concentrate. When cut with water this is close to 6 gallons of RTD cold brew.

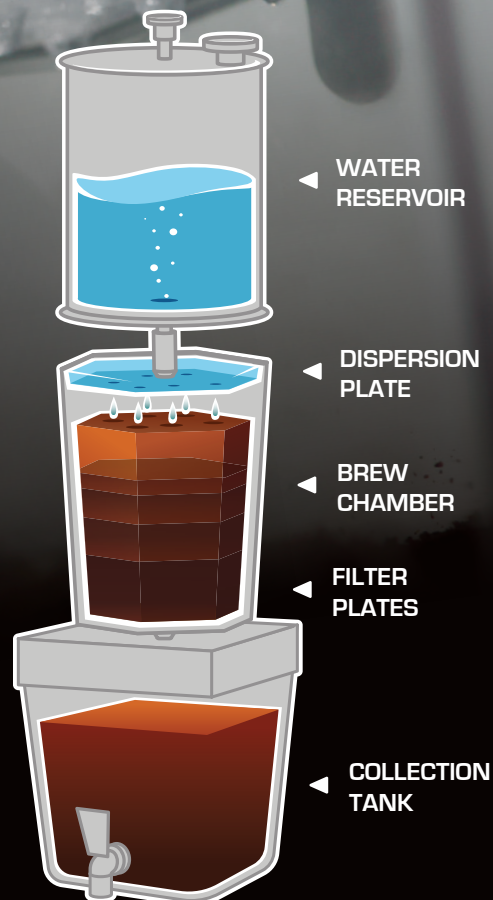

The fast brew time and the controlled gravity flow of water through the grounds, with no agitation, allows you to capture the prime attributes of your blend and optimize the quality and extends shelf life.

Because there is no agitation of the grounds during brewing, there is very low turbidity and no need for secondary filtering.

The water tank, brew chamber, and collection tank are clear and made from FDA approved shatter proof materials. Brew cells can be rinsed between uses and sanitized daily.

** Yields and throughputs vary based on coffee origin, roast levels, and grind size. TORR does not warrant performance.

Actual brew results may vary by +/- 20%.
