

HIVEBREWTM ONE

CLEAN, BACTERIA FREE, ESPRESSO STRENGTH
COLD BREW FROM YOUR HOME KITCHEN OR RETAIL
COUNTERTOP IN LESS THAN 20 MINUTES

The HIVEBREW ONE creates espresso strength concentrate around 5 times stronger than ready-to-drink cold brew. The resulting concentrate can be used as a faster, cleaner, lower-cost base for all your cold coffee drinks. Makes great Americanos, Iced coffees etc. A great substitute for espresso in many hot and cold applications.

The brewer requires no power, gas or expensive fancy contraptions. A simple gravity fed active extraction brewing method via our patented controlled flow process.

A timeless Japanese inspired methodology brought up to today's standards with some significant but simple improvements in brewing technology. Using multiple Kyoto drip processes combined with a Shishi-odoshi style flow regulation the drip rate is adjustable from 10 to 40 minutes allowing you to craft your unique concentration & taste profile.

It's typical for a third of a pound of fine ground coffee beans to produce 10 fluid ounces of 5:1 concentrate at 6-7 TDS. That's 5 - 6 ounce cups of iced coffee per brew. About 5 cents of clean, high quality coffee per cup.

*TDS = Total Dissolved Solids

Brew Espresso Concentrate at Home
Countertop gravity brewer. No power.
Easy cleanup
Cold or Hot brewing
Works for fine or coarse grind
Also loose leaf tea brewing

HIVE BREW ONE™

Countertop Cold Concentrate Brewing System

as simple as...

7 x 7" footprint
15.5" high
2 lbs empty weight

1. Add 1/3 of a pound to the brew cell
2. Pre infuse with 6 ounces of water in a locking sandwich bag.
No need for pre-infusion in hot brewing applications.
3. Add 16 oz. of warm water (around 95F°) to the HIVE BREW ONE™ source tank
4. Adjust the flow valve so that each dose cycle takes approximately one minute

The resulting concentrate is 6 to 7 TDS, or around 5 to 1 for ready-to-drink strength and can be used for an entire line-up of coffee specialty drinks both hot and cold.

** Yields and throughputs vary based on coffee origin, roast levels, and grind size. TORR does not warrant performance. Actual brew results may vary by +/- 20%. *TDS = Total Dissolved Solids.

Need more output?
HiveCafe 3&6

15 to 25 minutes gets 0.6 gallons
of typically 5.0 TDS concentrate.
